

Advanced Paging System

Powered by: **Mobility eXchange**

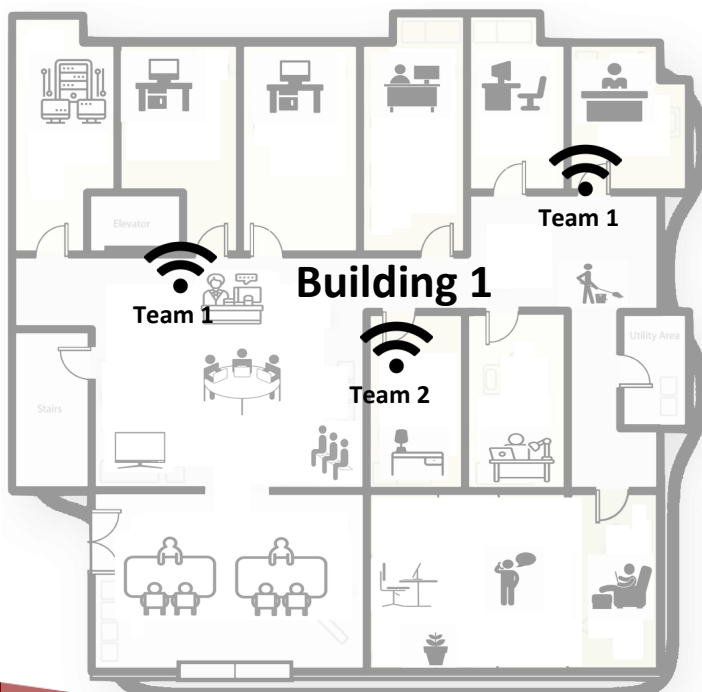

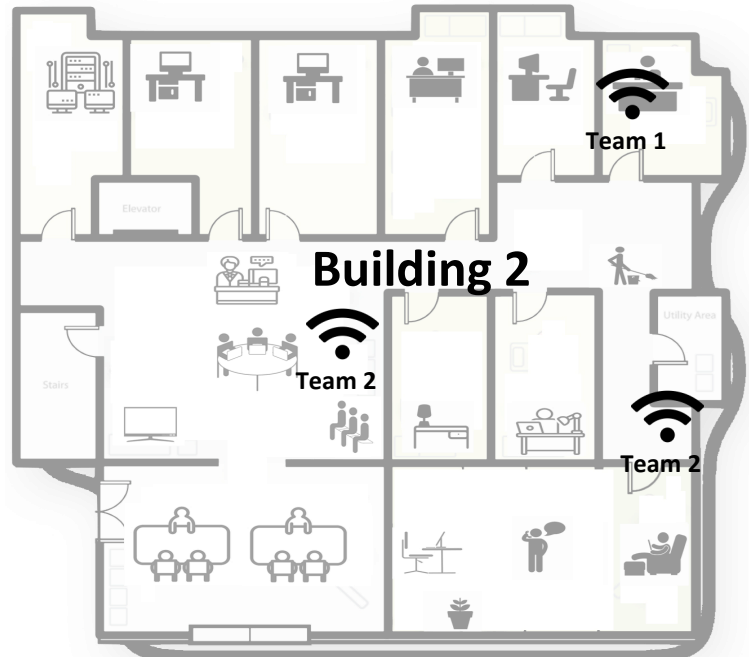

Mobility Exchange has pioneered a solution that encompasses a secure, locked down mobile application for employee communication that enables leadership and control center to send and receive orders, tasks and updates, allowing for quick decision making and team tracking.

Challenge:

Aging paging systems are no longer compatible with today's networks and technology, but contacting teams and relaying information has never been more necessary. Companies need an advanced secure system that can relay important and time sensitive information quickly and efficiently.

Benefits:

- Contact and locate team members from anywhere
- Secure paging and messaging system
- Increased productivity and accountability
- Advanced inscription and authentication through Military-grade FIPS 104-2 certified software

What's included:

- A secured paging system (BYOD or devices supplied by Mobility Exchange)
- APS application and setup
- Training and continual support
- Secure web based portal to organize teams, send pages and other forms of communication

Optional additions:

- Locked down device and network
- Customizable device management portal
- Protection from device damage with MobilityCare

Advanced Paging System (APS)

Powered by: **Mobility eXchange**

Managers are able to page workers in groups, requiring their “check in” when they arrive at a requested location. This also aids in the security and accountability of employees. Sharing information has never been easier with the secure chat feature.

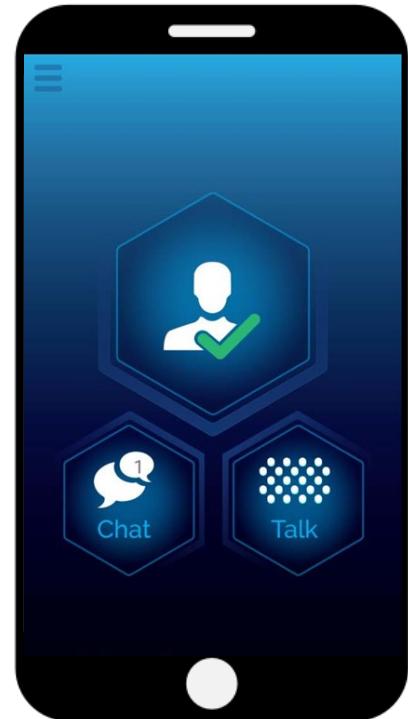

Team Members:

APS can be integrated into client’s mobile system or installed in a device deployed by Mobility Exchange.

APS :

- Send and receive secure messages to control center
- Push to Talk with control center and group
- Real-time GPS tracking
- Check in/out feature
- Simple user interface

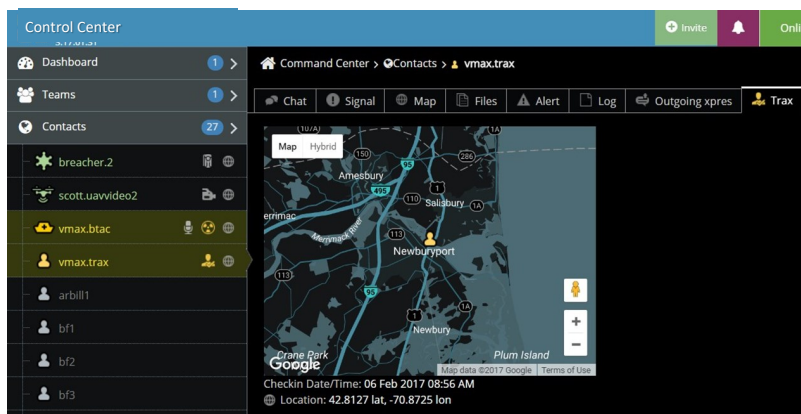

With security and ease of use as high concerns, many companies have searched for a solution to unique communication challenges.

Control Center:

A secure web based portal that gives the user the ability to track, page, message and organize teams for effective communication.

- One portal to control multiple teams or individuals
- Real time GPS tracking of team members
- Page team or send individual secure messages
- Customizable dashboards can be created
- Send alerts for quick response
- See who has checked in and who is checked out
