

# Behavioral Workflow Enhancement

Powered by: **Mobility eXchange**

In order to eliminate a prolonged (3-5 day) stay of mentally ill patients in Jail system, Mobility Exchange has engineered a solution that focuses on improving communication while bridging the gap between Law Enforcement and Behavioral Health providers.

## How It Works:

The purpose-built device is integrated into a squad car and is enhanced with a custom user interface which includes the specific applications that are needed to communicate with behavioral health contractor's call center. The device provides data cap-turing capabilities and is seamlessly integrated into a call center and intake system.

### What's Included:

- Locked down device with case and security bracket for mounting to car
- Device is locked to Behavioral health system and applications
- Protection from device damage with MobilityCare

### Optional Features:

- Advanced Paging System to alert Doctor or potential need
- Customizable device management portal

### Benefits:

- Assess individual prior to taking them to Jail
- Improve collaboration with 3rd party contacted providers to aid in assessment of the individual
- Prevent jail time where possible and assist with providing proper help and support for those with mental illnesses
